

MIX CONTROLLER 2.0

- 218 X 85 X 62 MM / 8.6 X 3.3 X 2.4"
- MAX 200W
- 0.480 KG / 1 LBS
-  **UL CE RoHS IP20**

MIX Controller is required to operate one MINI MIX or one SL1 MIX head lamp.

The MIX controller has the following communication protocols inbuilt:

- › Proprietary "MIX Communication Protocol" via Bluetooth with the myMIX app, up to 14 lights connected at the same time.
- › DMX 512 (with RDM) via XLR-5 or wireless CRMX by LumenRadio (Timo FX transceiver).
- › ArtNet via LAN (RJ45) and WiFi.

 **DMX 512**  **lumenradio**

Input / output Voltage: 12 to 30VDC.
The MIX controller is RDM enabled.
Built-in micro-USB for upgrades.

Warning for battery operation:

The controller can accept v-mount or gold-mount batteries.
For the MINI MIX: input battery voltage from 12 to 30VDC.
For the SL1 MIX: input battery voltage is **only 24 to 30VDC.**

DISCLAIMERS

General precautions

- DMG Lumière products are made to be used by trained professionals only.
- DMG Lumière products are not for household use.

Risk of falling

- All lights must be secured with an appropriate safety system (additionally to the mounting system provided). All lamp heads have security cables attached for this purpose. If not used, there is a high risk of accident, falling or death.
- Make sure the slings or chains chosen to secure the light complies with the security standards in the country you are in.

Risk of electric shock and fire

- High voltage when using with External Power Supply.
- Use only the power supplies sold by DMG Lumière to power the lights.
- When inputting 220V or 110V AC current, make sure the power supply is connected to the ground before using.
- Do not open the product. There are no user serviceable parts inside.

Overheating

- Do not operate the product if the ambient temperature exceeds 40° C.
- Intensive use can cause the surface to become hot.
- Let the product cool down completely before you handle it.
- Do not cover the air vents!

Intense light

- Do not look at the light directly.

Warnings

- Stage and studio use only.
- Dry location only.
- Hazardous voltage.
- Risk of electrical shock.
- Disconnect power before servicing.
- Not for residential use.
- Not for household use.

Power Cut Safety

- If power is cut inadvertently the controls will turn back on automatically when power is back.
- The controls will always turn back on in the last state it was.
- The last state of controls is automatically saved every three seconds.

DANGER!

Risk of injury or death through epileptic seizure when using the strob effect.

Do not use the effect near stairways, in corridors or near public exits. Provide advance notice that strobe lighting is in use. Display advisory notices on the set, at the point of ticket sales, on tickets if possible, in the program, and at the entrance(s) to the venue or studio. Avoid extended periods of continuous flashing, particularly at frequencies of 10 to 20 flashes per second. At flash rates below 5 flashes per second, it is estimated that only 5% of flicker-sensitive persons will be at risk of seizure. Make sure that personnel at the venue are trained in the care of a person who is having an epileptic seizure and able to provide care if necessary. If strobes are in use and a person has a seizure, switch the strobes off immediately. Mount strobes as high above head height as practicable.

MIX CONTROLLER LOCAL USER INTERFACE

1. POWER

Turns the fixture ON or OFF.

Short press: Turns ON the controls. When ON, a short press will do a quick blackout.

Long press: Turn OFF the controls.

2. GEL

Sets the light in gel mode. In gel mode you can set the intensity, saturation, white base and hue of the fixture.

Short press: Enter gel mode.

Long press: No function.

3. WHITE

Sets the light in white mode. In white mode you can set the intensity, CCT and Green/Magenta correction of the fixture.

Short press: Enter white mode.

Long press: No function.

4. DISPLAY SCREEN

The display shows the current settings and other information.

10. BACK

Back button takes you one step back in menus and locks the fixture controls.

Short press: One step back in navigation.

Long press: Lock all buttons and the rotary knob. Unlock all buttons and the rotary knob.

9. COLOR

Sets the light in color mode. In color mode you can set the intensity, saturation, white base and hue of the fixture.

Short press: Enter color mode.

Long press: No function.

8. LIBRARY

Enter the fixture library. All saved presets (white, gels, colors...) are stored here, as well as effects and source match.

Short press: Enter the library.

Long press: Store a preset when controlling the fixture. Delete a preset when in the library.

7. ROTARY KNOB

Use the rotary knob to set values on selected function, as well as to navigate through the menus.

Short press: Change between presets when in white, gel and color mode.

Long press: No function.

6. NAVIGATION

The navigation button allows you to switch from one controllable function to another.

Short press: Switch from one controllable function to another.

Long press: Link or Unlink the CRMX module (Lumen Radio chip).

THE 3 OPERATING MODES: WHITE / GEL / COLOR

- Use the navigation button to go around the screen functions in each corner of the screen.

- Change values with the dimmer button. Press the dimmer to access presets. Example: Intensity has 4 presets: 25, 50, 75 and 100%.

• WHITE MODE

Simple CCT mode where you can change the intensity, CCT and Green/Magenta.

Intensity resolution: 0.1%.

CCT range and resolution: 1700°K~10000°K with a 50°K increment.

Green/Magenta range and resolution: full green to full magenta (100G to 100M) with a 1G or 1M increment.

• GEL MODE

Gel selection mode where you can select any of the gels available in the MIX (standard and saved). Saturation and hue are available on a limited range.

Intensity resolution: 0.1%.

White base: 3200°K or 5600°K.

Hue range: -10°~+10° (1° increment).

Saturation range: -20%~+20% (1% increment).

• COLOR MODE

Color selection mode. This mode is an HSI (Hue, Saturation, Intensity) with the ability to select the white base between 1700°K and 10000°K.

Note that in DMX mode, the CCT base can be anything from 1700°K to 10000°K.

Intensity resolution: 0.1%.

CCT base: 1700°K or 10000°K.

Hue range: 0°~360° (1° increment).

Saturation range: 0%~100% (1% increment).

THE SAVE FUNCTION

• SAVING A PRESET IN MYMIX

To save a preset in myMIX, press the LIBRARY button with a long press until you get prompt the "SAVING PRESET" option. Presets will be saved in the myMIX section. A maximum of **30 presets** can be saved in myMIX.

• CALLING UP PRESET

To call up a preset enter the Library mode. All your saved presets are stored in myMIX. Presets sent from the myMIX app will also be stored here.

• DELETING A PRESET

To delete a preset, you must be in LIBRARY/myMIX with a preset selected. Hold down the LIBRARY button with a long press, until you receive a prompt with a 'delete' option. You will be asked to confirm the deletion.

THE LIBRARY AND ITS FOLDERS

To understand how to use the DMX call up number, go to page 10.

• EFFECTS FOLDER

Effects selection mode, this is where all effects are stored. To START/STOP the effect, **short press** the ON/OFF button.

TYPE	NAME	DMX CALL UP NUMBER	ROSCO NUMBER	ROSCO SERIE

THE LIBRARY AND ITS FOLDERS (CONTINUED)

• MYMIX FOLDER

This is your "personal" space, where you can store your favorite colors, whites, gels etc...

Any saved preset will go inside this folder -> long press of the LIBRARY button in any modes: WHITE / GEL / COLOR / EFFECTS / SOURCE MATCH and the preset will go automatically into the myMIX folder.

You can have a maximum of 30 presets into the myMIX folder.

This folder is retrievable into the myMIX app. With the app, you can import the myMIX folder into your mobile device (import FAVORITES), as well as send the presets you have on the app (send to Controller).

CONTROLLER SETTINGS

• BLUETOOTH: BT/OFF

BT: Bluetooth is ON, Remote Control is available via Bluetooth and the myMIX app. Please note that Bluetooth and WI-FI cannot be turned on at the same time. Turning ON Bluetooth will turn off WI-FI and vice versa.

• DMX MODE

Remote Control is available via Artnet, wired and wireless DMX.

• DIMMING CURVE

Linear: The default curve. The light outputs follow a straight line. 50% on the dimmer equals 50% of the total light, for example.

Square law: The light output shares the same pattern that the human eyes perceives. It will feel more realistic (in terms of total light output) to the human eye compared to a linear curve.

S Curve: Closer to traditional analog dimmers.

Tungsten emulated (only in white mode at 3200°K): tungsten emulated curve will change the CCT from 3200°K at 100%, to 1700°K at 0.1%, emulating the warmer CCT of a dimmed Tungsten light.

CONTROLLER SETTINGS (CONTINUED)

• GEL SORTING

Choose how to sort Rosco gels in the library, by name, color or number.

• RDM (REMOTE DEVICE MANAGEMENT)

MIX is RDM enabled.

It allows MIX light fixtures to send data/settings back to a remote control console (see table below).

Some settings can be changed, others cannot.

RDM table of MIX controller:

CATEGORY	VALUE	MODIFIABLE
MODEL	DMG-MIX	No
MANUFACTURER	DMGLUMIERE (C) 2018	No
DMX START ADDRESS	Example:1	Yes
DMX PERSONALITY (DMX PROFILE)	Example: White 8b	Yes
DMX SLOTS	Example: 4	No
LAMP HEAD TEMP	Example: 50°C	No
CONTROLLER FIRMWARE VERSION	Example: V1.0	No

• FACTORY SETTINGS

Reset to factory settings, decide to keep or not the content of the myMIX folder.

• INFORMATION

Serial Number/Firmware Version/Hour Count/Operating Temperature.

For light version :
Digit 1: LED batch number.
Digit 2: 1 = MINI ; 2 = SL1, 3 = MAXI.

• ERROR CODES

ERROR CODE	DESCRIPTION
NONE	No error
ERROR 1	Channel 1 is not working (open circuit, voltage diff,...)
ERROR 2	Channel 2 is not working (open circuit, voltage diff,...)
ERROR 3	Channel 3 is not working (open circuit, voltage diff,...)
ERROR 4	Global Driver Error (All channels affected)
ERROR 5	Temp sensor n°1 can't be read
ERROR 6	Temp sensor n°2 can't be read
ERROR 7	Mem cannot read can't be read

COMMUNICATION PROTOCOLS: ARTNET, DMX512 AND BLUETOOTH WITH myMIX APP

The MIX Controller can be operated remotely via 3 communication protocols:

• DMX 512 WIRED AND WIRELESS

DMX512 is a worldwide standard communication protocol for the film and entertainment industry.

There are 2 ways to communicate DMX to the MIX controller: wired DMX (XLR 5 pin) or Wireless DMX (Lumen Radio Timo FX RDM).

• BLUETOOTH WITH MYMIX APP

MIX can be controlled remotely via Bluetooth with the myMIX app. myMIX app can control up to 14 controllers simultaneously. Available on IOS and Android, see page 14.

• ARTNET

ArtNet is a communication protocol for transmitting the DMX512-A lighting control protocol and Remote Device Management (RDM) protocol over the User Datagram Protocol (UDP) of the Internet Protocol suite. It enables lights to be controlled over standard internet or LAN network (via Wifi or RJ45 connector).

SETTING UP ARTNET, DMX AND BLUETOOTH

To use the MIX in ArtNet or DMX, go to SETTINGS\DMX MODE. If you have plugged in a DMX cable, the light will go to DMX mode automatically.

• DMX MODE OVERVIEW

Select input:

- XLR.
- CMRX (wireless DMX by Lumen Radio).
- LAN (Art-Net).

Select your DMX start address.

Select your profile from the 7 profiles available (refer to user manual for details on the profiles).

Select output:

- XLR.
- CMRX (if input is CMRX you cannot output in CMRX).
- None.

Status of DMX in and out.

Make sure DMX is enabled.
This is a basic security so local users cannot change to another mode while a board-op is operating the light via DMX.

• LINKING AND UNLINKING CRMX

- To link receivers when sending CRMX, press the NAVIGATION button for 3 seconds (long press) while the data OUT box is selected (when it is red).
- To unlink receivers when sending CRMX, press the NAVIGATION button for 3 seconds (long press) while the data OUT box is NOT selected (when it is NOT red).
- To unlink CMRX when in receiving mode, press the NAVIGATION button for 3 seconds (long press) while the data IN box is selected (when it is red).

WARNING: In DMX mode, when DMX IN is set to WIFI, the Bluetooth (BT) is automatically turned OFF (both WIFI and BT cannot be ON at the same time). If you were connected with the App you will lose connection. To reconnect, turn the Bluetooth back on BT.

SETTING UP DMX AND BLUETOOTH (CONTINUED)

• SETTING UP DMX (WIRED AND WIRELESS)

Input XLR or CRMX (wireless DMX by Lumen Radio).
Set up the address (check DMX profiles table to enter correct addressing system).
Enable DMX.

In the library, each preset, gel, source match and effect have a 3-digit DMX number attached to it.

Each DMX digit can be called, using 3 channels.

DMX call up table as below:

0~99: myMIX.

100~699: gels.

700~799: source match.

800~899: effects.

900~999: free space.

Example:

If you would like to call up the GEL 'Mauve', which has a DMX number of 125 (displayed in the LIBRARY and in the myMIX app).

Use the 3 channels dedicated to calling up a preset in your DMX setup:

Channel 1 (hundreds): 0 - 10% = 1.

Channel 2 (tens): 20% - 29% = 2.

Channel 3 (singles): 50% - 59% = 5.

You can then call the preset 125, or «Mauve».

Refer to the table on page 7 or in the myMIX app.

• SETTING UP T AND R MODE

When 2 MIX features are linked together via XLR5, you can control all of them from one of them from on single user interface. To do so, put the controlling MIX in DATA OUT: T mode and the receiving MIXs in DATA IN R mode.

MIXs need to be lined via XLR in order to do this.

Everything done on the transmitting side will be mimiced on the receiving side.

You can also control the transmitter via myMIX, allow for an «infinite» number of MIXs to be controlled remotly.

• SETTING UP BLUETOOTH WITH MYMIX APP

To use the MIX in Bluetooth make sure Bluetooth is set to BT in the settings menu:

Bluetooth is ON when set to BT.

Bluetooth symbol should show in white/color/gel.

On the myMIX APP the light's name will be the light's serial number.

• SETTING UP ARTNET

If you connect to the controller with Wi-Fi, connect to the Wi-Fi network that has the same name as the controller's serial number (ex: MIX-1906-0001).

Use the following password: dmglumiere

On the controls: Controller Settings / DMX Mode / Input WIFI or LAN – the controller is ready to receive the ArtNet Protocol.

In ArtNet, you need to broadcast to 2.255.255.255. Subnet 0, universe 0.

DMX PROFILES

IMPORTANT INFORMATION:

In profile 3, only gel memories can be selected.

In profiles 4 and 5 if the memory called is 000, then user has control of the selected function.

Example: if 000 memory is called, then one can use the HUE and SAT mode as on the controller.

DMX PROFILES (CONTINUED)

Three basic DMX Profiles replicating the local modes: White/Color/Gel

#	PROFILE NAME	PROFILE DESCRIPTION	CHANNEL 1	CHANNEL 2	CHANNEL 3	CHANNEL 4	CHANNEL 5	CHANNEL 6	CHANNEL 7
1	White mode (same as local)	White 8 bits	Dimming	CCT	Green/Magenta				
2	Color mode (same as local)	Color 8 bits	Dimming	White base color (0~127=3200°K 128~255=5600°K)	Hue (2° steps)	Saturation			
3	Gel mode (same as local)	Gel 8 bits	Dimming	mem # hundreds	mem # tens	mem # singles	White base gel (0~127=3200°K 128~255=5600°K)	Hue gel (-10/+10 256/20= number of steps)**	Saturation gel (-20/+20 256/40= number of steps)**

Four Pro DMX Profiles for ultimate control

#	PROFILE NAME	PROFILE DESCRIPTION	CHANNEL 1	CHANNEL 2	CHANNEL 3	CHANNEL 4	CHANNEL 5	CHANNEL 6	CHANNEL 7
4	All modes in one profile 8bits	Pro 8 bits	Dimming	mem # hundreds	mem # tens	mem # singles	CCT (white base for White mode and Color mode)	Green/Magenta for White mode	Hue (2°)
5	All modes in one profile 16bits	Pro 16 bits	Dimming Coarse	Dimming Fine	mem # hundreds	mem # tens	mem # singles	CCT (white base for White mode and Color mode)	green/magenta for white mode
6	Individual control of each LED	Full 8 bits	Dimming	CCT base	G/M	Saturation (cross fade from CCT to a color mix)	Red	Green	Blue
7	Individual control of each LED	Full 16 bits	Dimming Coarse	Dimming Fine	CCT base	G/M	Saturation (cross fade from CCT to a color mix)	Red	Green

Four Pro DMX Profiles for ultimate control (continued)

#	CHANNEL 8	CHANNEL 9	CHANNEL 10	CHANNEL 11	CHANNEL 12	CHANNEL 13	CHANNEL 14	CHANNEL 15	CHANNEL 16	CHANNEL 17	CHANNEL 18	CHANNEL 19	CHANNEL 20
4	Saturation color 0-100%	White base gel (0~127=3200°K 128~255=5600°K)	Hue gel (-10/+10 256/20 = number of steps)	Saturation gel (-20/+20 256/40 = number of steps)	Effects SPEED	x position	y position	Strobe channel	Control channel				
5	Hue (coarse)	Hue (fine)	Saturation color 0-100%	White base gel (0~127=3200°K 128~255=5600°K)	Hue gel (-10/+10 256/20= number of steps)**	Saturation gel (-20/+20 256/40= number of steps)**	Effects SPEED	x position coarse	x position fine	y position coarse	y position fine	Strobe channel	Control channel
6	White	Amber	Lime	Strob channel	Control channel								
7	Blue	White	Amber	Lime	Strob channel	Control channel							

*Control Channel: see p14.

DMX PROFILES (CONTINUED)

*The control channel:

DMX	FONCTION	DESCRIPTION
0	No fonction	Nothing
11-20	Dim curve linear	Dimmer linear
21-30	Dim curve square	Dimmer square law
31-40	Dim curve s curve	Dimmer in scurve mode
41-50	DIm curve Tungsten	Dimmer in Tungsten emulated
51-60	No fonction	Nothing
61-70	CRMX unlink	Unlink the fixture from a lumenradio transmitter
71-80	CRMX unlink	Unlink the fixture from a lumenradio transmitter
81-90	No fonction	Nothing
91-100	Bluetooth on	Bluetooth on
101-110	Bluetooth off	Bluetooth off
111-120	No fonction	Nothing
121-130	RDM off	Turns off the RDM
131-140	RDM on	Turns on the RDM
141-150	Slew=0	Set slew to 0
151-160	Slew=25 (actual slew)	Set slew to 25 (if 25 is what we have now)
161-170	Save in myMIX	Save current stae in my MIX in the controller

To activate/deactivate a setting, stay 3 seconds on the proposed DMX value. Then, go back to 0.

THE myMIX MOBILE APPLICATION The myMIX app is available on [Google store](#) & [App Store](#).

IMPORTANT NOTICE :

myMIX 2.0 is not compatible with the MIX controller firmware version 1.0 and 1.01. You will still be able to connect and update the firmware, but not control the light. Please make sure you update your controller if you have the version 2.0 of myMIX.

Connect your light:

1. Press SCAN to discover MIX lights.

2. Click on a MIX to connect to it.

3. Click again on your light to enter live mode.

Your light is connected.

THE MYMIX MOBILE APPLICATION (CONTINUED)

Select the mode:
WHITE / GEL / COLOR / EFFECTS / SOURCE MATCH

Sensitive touchpad to change values.

Dial in a value with the keyboard.

In color mode, use the touchpad for HUE+SAT.

Scroll through presets.

THE MYMIX MOBILE APPLICATION (CONTINUED)

Create / Name folders to organise your colors.

Turn your most used colors into favorite for a quick access.

Touch here to access a wide library of true Rosco color.

Find your gel, sort the list by name, color or number. The "Apply Gel" button will remove/add the gel.

THE MYMIX MOBILE APPLICATION (CONTINUED)

In the color mode, touch the camera to access the CAPTURE function.

Chose a picture from your gallery or take one, you can then pick the color out of the picture and load it to the light.

Source Match Mode: select the source you want to match and adjust intensity.

Effect Mode: press the PLAY button, select the effect, change speed, intensity and the color of the LEDs.

THE MYMIX MOBILE APPLICATION (CONTINUED)

To control several lights together you must create a group:

Create a group of lights.

Click the "+" sign to add a light to the group.

Check if every light of the group is connected.

NEW : the Color xy mode

You can select 3 colors spaces on the xy mode: MIX (biggest space possible) REC709 and REC2020.

UPDATING THE MIX FIRMWARE V1.01 TO V2.0

IMPORTANT NOTICE :

myMIX 2.0 is not compatible with the MIX controller firmware version 1.0 and 1.01. You will still be able to connect and update the firmware, but not control the light. Please make sure you update your controller if you have the version 2.0 of myMIX.

• UPDATE YOUR MIX(S) VIA MYMIX

If your MIX controller is not up to date with the latest firmware version, myMIX will prompt you to update. Before updating, please make sure your phone is connected to a power source or has sufficient battery.

Updating one controller will take 10 minutes, 2 controllers 16 minutes, 3 controllers 21 minutes, 4 controllers 27 minutes.

It is not recommended to update more than 4 controllers at a time.

During the update, please make sure your phone is as close a possible to the controllers, and that you do not move around with it.

• UPDATE YOUR MIX(S) VIA WINDOWS 10

This software is for Windows 10 only.

1. Download the update software on dmglumiere.com.
2. Download the latest firmware on dmglumiere.com.
3. Follow the installation instruction.

ENJOY !
